NEW JERSEY STATE DEPARTMENT OF ENVIRONMENTAL PROTECTION**MEMO**

TO Steve Carfora

FROM Dave Schrier DATE 8/18/82

SUBJECT Classification of Samples AII58A and AII59A.

Please be advised that sample AII59A is classified as non-hazardous based on the attached laboratory analysis.

Sample AII58A contained 13% oil and grease which would preclude it from being disposed of in a landfill. Additionally, the EP extraction procedure could not be carried out because of the physical nature of the sample. Heavy metals were determined in the raw sample with measurable quantities of EP toxic metals. Since this sample was the result of a spill, the sample is therefore classified as hazardous.
